WHAT IS CLAIMED IS:

1	1.	An absorbent product comprises an absorption body having a
2	generally oblong shape with two longitudinal sides, two transverse sides, a	
2	longi	tudinal center line

4 a first liquid-permeable surface layer,

and forms a raised leakage barrier.

- 5 a second essentially liquid-impermeable surface layer,
- 6 an essentially liquid-impermeable backing layer,
- an absorption body positioned between said liquid-permeable surface
 layer and said backing layer,
- two leakage barriers made of flexible material and extending in the
 longitudinal direction with one of the barriers on each side of the longitudinal
 center line and the liquid-permeable surface layer,
- each of the leakage barriers having a first edge permanently fastened
 along the liquid-permeable surface layer and a second edge which extends
 in the direction of the longitudinal center line of the absorbent product,
 - each of the leakage barriers also having a first surface and a second surface, wherein one of the first surface and the second surface of each of said leakage barriers is fastened to or near to one of the first, liquid-permeable surface layer and the second, liquid-impermeable surface layer.
 - 1 2. The absorbent product according to Claim 1, wherein the one of the 2 first surface and the second surface of each of said leakage barriers is 3 fastened in a temporary manner by a binder which loses its adhesive or 4 cohesive capacity during use of the absorbent product, wherein the one 5 surface of each leakage barrier then comes away from its fastening surface
 - 1 3. The absorbent product according to claim 1, wherein the binder loses 2 its adhesive or cohesive capacity within the temperature range 30-37°C.

- The absorbent product according to claim 1, wherein the binder is oil,
- 2 wax or glue.
- 1 5. The absorbent product according to claim 1, wherein the binder
- 2 comprises glycerides or C₁₄-C₂₂ fatty alcohols.
- 1 6. The absorbent product according to claim 1, wherein the binder is a
- 2 glue.
- 1 7. The absorbent product according to claim 1, whereas the binder is a
- 2 mixture of saturated and unsaturated C₁₂-C₂₂ fatty acids.
- 1 8. The absorbent product according to claim 1, wherein the binder loses
- 2 its adhesive or cohesive capacity at TEWL values above 20 g/m²h.
- 1 9. The absorbent product according to claim 1, wherein the leakage
- 2 barriers comprise a non-woven material or laminate thereof.
- 1 10. The absorbent product according to claim 1, wherein the binder is
- 2 constituted by ultrasonic welding or a thermal bond.
- 1 11. The absorbent product according to claim 1, wherein the binder
- 2 comprises glycerides or C₁₂-C₂₂ fatty acids.
- 1 12. The absorbent product according to claim 1, wherein the binder
- 2 comprises glycerides or C₁₂-C₂₂ fatty alcohol ethoxylates with a degree of
- 3 ethoxylation of roughly 2 to roughly 30.
- 1 13. The absorbent product of claim 1, wherein the absorbent product is a
- 2 diaper, a pant diaper, an incontinence pad, a sanitary towel or the like.

- 1 14. The absorbent product according to claim 1, wherein the binder
- 2 comprises derivatives of glycerides or C₁₄-C₂₂ fatty alcohols.
- 1 15. The absorbent product according to claim 1, wherein the binder
- 2 comprises derivatives of glycerides or C₁₂-C₂₂ fatty acids.
- 1 16. The absorbent product according to claim 1, wherein the binder
- 2 comprises derivatives of glycerides or C₁₂-C₂₂ fatty alcohol ethoxylates with a
- 3 degree of ethoxylation of roughly 2 to roughly 30.
